1888.

# ANNUAL REPORT

FROM

## THE GOVERNMENT STATISTICIAN.

Presented in accordance with Resolutions of both Houses of Parliament.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1890.

(SECOND SESSION.)

#### NEW SOUTH WALES.

## VITAL STATISTICS.

THE GOVERNMENT STATISTICIAN TO THE HONORABLE THE COLONIAL SECRETARY,

TRANSMITTING ABSTRACTS OF

## MARRIAGES, BIRTHS, AND DEATHS,

FOR THE YEAR 1888.

Sir,

I have the honor to submit to you a Report on the Vital Statistics of the Colony, together with detailed Abstracts of Births, Marriages, and Deaths, for the year 1888, compiled from Returns received from the Registrar-General, this being the thirty-third year since the present system of Registration was established under the provisions of the Act of Council 19 Victoria No. 34.

The estimated population of New South Wales on the 31st December, 1888, was 1,085,740 persons, Population. giving an increase of 42,821, or 4·1 per cent., on the estimated population of the previous year. Of this increase 24,117 resulted from the excess of births over deaths, and the balance consisted of 15,326, the number by which the arrivals by sea exceeded the departures and 3.378 the gain to the Colony over

number by which the arrivals by sea exceeded the departures, and 3,378, the gain to the Colony overland from Victoria and South Australia. The number of males was reckoned to be 599,107, and of females 486,633, or 55.18 and 44.82 per cent. respectively of the total. Much the same relative proportion in favour of males has been maintained for many years past.

The following Table shows how the estimate of increase for the twelve months was made up, and also the total increase since the last Census:-

POPULATION of the Colony for the year 1888, and Estimated Increase since the Census of 1881

	Males.	Females.	Total.	Males.	Females.	Total.
Births during the year 1888	19,616 8,453	18,909 5,955	38,525 14,408

Total Increase since the Census	•••••		.,	187,958	146,314	334,272

\* Including 1,848 Chinese. † Including 1,562 Chinese.

In estimating the population each year allowance is made for unrecorded departures by sea, and the number so deducted since the last census in 1881 has amounted to 41,505. Had this not been done, the apparent population of the Colony at the close of last year would have been 1,127,245.

Of the total population, 1,085,740, it is estimated that 366,684 were residing in Sydney and Suburbs, Metropolitan and 719,056 in the Country Districts; from which it would appear that 33.77 per cent., or more than a population, third of the inhabitants, dwell within the metropolitan boundaries. The tendency of population to increase more rapidly in and around the capital city of the Colony than in the country districts, has been very noticeable during the last few years. In 1861 the percentage of the population of the Colony living in the metropolis was 26.70; in 1871, 26.73; in 1881 it had risen to 29.40; and in 1888 it was 33.77, as aforesaid. ESTIMATED

ESTIMATED POPULATION of Sydney, Suburbs, and Country Districts, 31st December, 1888.

Sydney	•••			Males. 70.082	Females. 57.367	Total. 127,449
Suburbs Country	•••	•••	•••	121,080 407,945	118,155 311,111	239,235 719,056
				599,107	486,633	1,085,740

The growth of population year by year in each of these divisions may be traced by comparing the following figures:—

POPULATION	at the	end	of each	vear-	1877	to 1888.
------------	--------	-----	---------	-------	------	----------

Year.	Sydney.	Suburbs.	Country.	New South Wales
1877	91,008	91,317	461,382	643,707
1878	94,228	98,718	478,942	671,888
1879	98,824	109,448	501,187	709,459
188o	102,161	118,010	521,722	741,893
1881	106,578	128,714	543,398	778,690
1882	110,112	138,119	562,602	810,833
1883	115,847	152,950	588,947	857,744
1884	121,441	167,760	614,747	903,948
1885	122,910	191,635	643.369	957,914
1886	124,379	209,919	667,668	1,001,966
1887	125,850	225,016	692,053	1,042,919
1888	127,449	239,235	719,056	1,085,740

The yearly increase in the number of persons living within the city boundaries appears small compared with the rapid development of the suburbs. This is to be accounted for in a great measure by the fact that as years roll on an increased area of the city becomes devoted to business, especially in Bourke, Brisbane, and Macquarie Wards, and a large number of families are of necessity forced to move out into the suburbs. Taking into consideration the areas, the rapid growth of the suburbs is only what might naturally be expected. The area of the city proper is 2,690 acres, and the various municipalities constituting the suburbs, 73,730 acres. The limits of the expansion of the city are therefore not great, and will soon be reached, whereas the suburbs have practically unlimited scope for further extension. At the time of the census of 1871 the population of the city was 76,159, and that of the suburbs 60,324; at the close of 1877, the year first mentioned in the above table, the populations were about equal, while, on the 31st December, 1888, the respective populations were—city, 127,449, and suburbs, 239,235,—34.76 per cent. of the metropolitan population residing in the former, while 65.24 per cent. found a home in the latter.

The number of marriages celebrated in the Colony during 1888 amounted to 7,844, being 254 more than in the previous year.

There were 38,525 births registered, showing an increase of 1,289 on the record of 1887.

The number of deaths was 14,408, as against 13,448 during the preceding twelve months, which shows an increase of 960.

In the following table will be found the numbers of marriages, births, and deaths, registered in the city and suburbs of Sydney, and in the country districts during each quarter of the year 1888.

TABLE showing the MARRIAGES, BIRTHS, and DEATHS registered in the Colony of New South Wales during each quarter of the year 1888.

Area of metropolis.

Marriages, births, and deaths.

#### MARRIAGES.

During the year the number of marriages celebrated in the Colony was 7,844, being, as before stated, 254 more than were registered in 1887. The ratio per 1,000 of the estimated mean population was 7.37, which shows a slight decline on the ratio of the previous year, which was 7.42. The average rate for the ten years 1878 to 1887 was 8.14.

Of the marriages in 1888 there were performed,—

In Sydney ... Suburbs ... ... 1,925 or 24.54 per cent. ... 1,602 20.42 ... 4,317 Country ... 55.04 ... 7.844 100.00

From which it is apparent that 44.96 per cent., or nearly half, of the marriages in the Colony

were solemnized in the metropolis.

In proportion to population the city of Sydney gives 15:20; the Suburbs 6:90; and the Country Marriage-rate. 6:12 per 1,000; the averages for the previous decade being 16:71, 7:73, and 6:59 respectively. The proportion to population in the metropolis last year was 9:83, and the decennial average 11:58. The foregoing ratios are of marriages to estimated population; the ratios of persons married would of course be double in each case.

Table showing the number of Marriages registered in the Colony of New South Wales during each Quarter of the years 1879 to 1888.

The number of marriages celebrated by the different religious denominations and at Registrars' Marriages by offices in 1888, together with their respective percentages, to the total number of marriages, will be found each Denomination. to be as follows:—Church of England, 3,134 (39.95 per cent.); Roman Catholic, 1,350 (17.21 per cent.); Presbyterian, 977 (12:46) per cent.; Wesleyan, 815 (10:39 per cent.); Congregational, 534 (6:81 per cent.); Primitive Methodist, 256 (3:26 per cent.); Baptist, 133 (1:70 per cent.); eight other denominations, 134 (1:71 per cent.); and by Registrars, 511 (6:51 per cent.) Compared with the figures of the previous year, the largest increase was in the number of Roman Catholic marriages.

The Table hereunder gives the number of marriages performed by the clergy of various denominations and by Registrars throughout the Colony for each year since 1879, and immediately after will be found a Comparative Table for 1887 and 1888, with percentages, &c.

Bachelors, spinsters, &c. The number of persons married during the year was 15,688. Of these 7,181 were described as bachelors, 7,159 as spinsters, 655 as widowers, and 678 as widows. There were also 8 divorced men, and 7 divorced women, who again entered into the matrimonial state. Of the total number of marriages there were 6,755 contracted between bachelors and spinsters; 420, between bachelors and widows; widowers and spinsters, 398; widowers and widows, 256; bachelors and divorced, 6; widower and divorced, 1; divorced and spinsters, 6; divorced and widows, 2.

The following Table gives the social conditions of all those married in Sydney, Suburbs, and Country Districts, during the year 1888:—

TABLE OF BACHELORS, SPINSTERS, &C.

	Number of Marriages.	Bachelors.	Spinsters.	Widowers.	Widows.	Divorced Men.	Divorced Women.
1888.				1		1	
Sydney	1,925	1,749	1,736	173	184	3	5
Suburbs	1,602	1,444 3,988	1,445 3,978	155	156	3	I
Country	4,317	3,988	3,978	327	338	2	I
Total	7,844	7,181	7,159	655	678	8	7

Minors.

Of the total number married, 2,197, or 14 per cent. were under the age of twenty-one years, and of these 195 were males, and 2,002 females (2.48 and 25.52 per cent. respectively). Comparing the number of minors married in Sydney, Suburbs, and Country Districts, with the total number of persons married in each of these divisions, the following percentages are arrived at:—9.64, 11.39, and 16.92. Early marriages, therefore, appear to be more prevalent in the country than in the metropolis.

In the table below will be found the numbers of minors married in the City and Suburbs of Sydney, and in the Country Districts, together with the numbers who were unable to write:—

#### TABLE OF MINORS.

			Minors.		Minors who signed by mark.

Sydney	1,925 1,602 4,317	36 36 123	335 329 1,338	371 365 1,461	4 1 2	5 1 3 <sup>2</sup>	9 2 34	
Total	7,844	195	2,002	2,197	7	38	45	

Out of a total of 2,197 minors, only 45, or 2 per cent., failed to sign their names, while the proportion of persons of full age was 4 per cent. This is a circumstance worthy of note, as the minors married were presumably for the most part natives of the Colony, and may be taken as strong evidence that the Education system which has been in force for twenty-three years, is rapidly reducing the residuum of illiteracy still found in the community to the smallest dimensions.

of illiteracy still found in the community to the smallest dimensions.

The following table shows the number of minors who were married during each year from 1877 to 1888, and also the percentage of such minors to the total number married.

	Marriages.		Minors.		Percentage of			
Year.		Bridegrooms.	Brides.	Total.	Bridegrooms.	Brides.	Persons married.

1886	7,811	187	1,806	1,993	2'39	23.15	12'76	
1887	7,590	181	1,911	2,092	2°38	25'18	13'78	
1888	7,844	195	2,002	2,197	2°48	25.52	14'00	

Of the 15,688 persons married during 1888, there were 587, or 3.74 per cent., who affixed their marks to the Registers (307 males, or 3.91 per cent., and 280 females, or 3.57 per cent.) This is the first year as far as observation extends in which the illiteracy of males has exceeded that of females.

The suburbs of Sydney present a more favourable record than either the city or the country districts, the percentages of marks to total signatures being—in the city, 3.51; suburbs, 1.84; and country, 4.55, with 3.74 as the mean, as before stated. From the report of the Registrar-General of England, for 1887, it would appear that, with a marriage roll of 200,518 for the year, the percentage of those signing by mark was 9.82, or 9.08 for men and 10.56 for women; while in 3.36 per cent. of the total marriages both husband and wife were unable to write.

Total	7,844	7,537	7,564	15,101	307	280	587	3.74

The next three tables give the numbers of marriages in the city, suburbs, and country districts; the numbers of persons signing by mark (males and females) in each of these divisions; and the rates per cent. of persons so signing, for a period of twenty years. The great improvement noticeable year by year in the educational status of the people is most remarkable and very gratifying.

#### BIRTHS.

Birth rate.

There were 38,525 births registered in the Colony during the year 1888, which is 1,289 in excess of the record of the previous year. The births of males numbered 19,616, and of females, 18,909, or 50.92 and 49.08 respectively. The birth-rate of the Colony per 1,000 of estimated population was 36.20; this is 0.22 less than in 1887, and 1.60 below the previous ten years' average (37.80). The respective birth-rates in Sydney, suburbs, and country districts were 29.70, 42.84, and 35.17; and the averages for the decennial period, 34.22, 44.17, and 36.85. Taking Sydney and suburbs as a whole the metropolitan birth-rate for 1888 was 38.20, and the mean from 1878 to 1887, 39.90.

Illegitimate births.

There were 1,958 births of illegitimate children registered in the Colony during the year 1888, viz., 960 of males and 998 of females. The percentage of these births to the total number was 508. The number recorded in Sydney was 567; in the suburbs 482; and in the country districts, 909. In proportion to the total number of births in each of these divisions the percentages of illegitimate births were as follows:—Sydney, 15:07; Suburbs, 4:85; Country, 3:66. The high rate for Sydney is to be accounted for by the large number of these births registered from the Benevolent Asylum, which institution probably accommodates many cases from all parts of the Colony. The total number of children born at the Benevolent Asylum during the year was 257 (139 males and 118 females), of whom 213 (116 males, 97 females) were illegitimate. Illegitimacy has been increasing in the metropolis for some years past; in 1871 the percentage of total births was 4:78, ten years ago it was 5:94, and last year 7:65.

Table showing the number of children born out of Wedlock in the Colony of New South Wales, from 1st January, 1879, to 31st December, 1888.

Note.—The Benevolent Asylum is in Sydney.

Twins and triplets.

During the year there was one case of triplets, which occurred at Tumut, and one case of four at a birth, at St. Peters, Cook's River, a suburb of Sydney. Twins numbered 363 cases, comprising 371 males and 355 females, in all 726 children. The number of infants born as quartettes, triplets, and twins forms 19 per cent. of the total births, a larger proportion than in any previous year.

\*One still-born. † Two still-born. ‡ Three still-born. § Four still-born.

The only instance of more than three children at a birth during the years 1879 to 1888 was the case above mentioned; the previous quadruplicate birth occurred in 1877. As stated in the foregoing table, there were 2,748 cases of twins and 17 cases of triplets during the ten years 1879–88. The total number of confinements recorded in this period was 323,333. It follows, therefore, that one mother in every 118 gave birth to twins, and one mother in every 19,020 was delivered of three children at a birth.

#### DEATHS.

From the registers for 1888, it appears that the number of deaths throughout the Colony was 960 more than in 1887; but apart from this year, which was a most favourable one, the death-rate of 1888 was lower than that of any year since 1871. The number recorded was 14,408, as compared with 13,448 in 1887, 14,587 in 1886, and 15,282 in 1885. Deaths of males numbered 8,453, and of females 5,955; the percentages being 58.67 and 41.33 respectively; so that the male deaths were much in excess of the female. But as the male population of the Colony is much larger than the female, the death-rates per 1,000 living (14.41 for males, and 12.46 for females) do not show such a vast difference in the mortality of the two sexes although the male rate is undealed the bighest of the sexes although the male rate is undealed to be a constant of the colony.

of the two sexes, although the male rate is undoubtedly the higher of the two. (See Table on next page.)

The death-rate of the Colony per 1,000 was 13.54, which, though higher by '39 than in the previous year, was 1.72 under the average of the decade (15.26). The rate for Sydney was 17.08, which is 1.56 above that of the preceding twelve months, but 4.34 lower than the average of the previous ten years (21.42.) The suburbs show a death-rate of 17.64, being 1.07 higher than in 1887; the average was 18.79. In the country districts the rate was 11.55, which is a decrease of '07 on the rate of the previous year, and 1.60 under the average (13.15) of the years 1878 to 1887. Comparing the metropolis, as a whole, with the country districts of the Colony, it will be found that the mean rate of deaths per 1,000 of the population during the ten years prior to 1888 was in the case of the former 19.92, while in the latter districts it was only 13.15, as stated above. The rates last year were—Metropolis, 17.44; country, 11.55. There are certainly conditions inseparable from city life unfavourable to health which do not pertain to the country, to which the difference may in a great measure be traced.

1884 ( Males	482,790 398,056	8,325 5,895	17°24 14°81	141
1885 ( Males	511,551 419,379	8,900 6,382	17.40	139
1886 ( Males Females	539,43 <sup>8</sup> 440,501	8,50 <b>1</b> 6,086	15.76 13.82	140
1887 { Males	562,678 459,765	7,776 5,672	13.82	137
1888   Males   Females	586,560 477,770	8,453 5,955	14.41	142 100

The death-rate in the suburbs of Sydney was higher than in the city itself, or in the country districts, but on the other hand the birth-rate was also higher, and as a natural consequence the mortality of infants helped largely to swell the number of deaths.

			Birth-rate.	Death-rate.	Exc	ess of Birth-rat	e.
Sydney	 	 	29.70	 17.08		12.62	
Suburbs	 	 	42.84	 17.64		25.20	
Country	 	 	35.17	 11.55		23.62	

Taking Sydney and suburbs as a whole for the purposes of comparison with the rest of the Colony, the following figures are arrived at:—

	Birth-rate.	Death-rate.	Exc	ess of Birth-rate	
Metropolis (Sydney and Suburbs)	38.20	 17.44		20.76	
Country Districts	35.17	 11.55		23.62	

From this it appears that while both birth and death-rates were higher in the metropolis than in the country districts, yet the difference between these rates, representing the natural increase to the population by the excess of births over deaths, was greater in the country. In the metropolis the births exceeded the deaths by 7,449, being an increase at the rate of 20.76 per 1,000 of the population; and in the country districts the increase was 16,668, or 23.62 per 1,000.

Excess of Births over Deaths in Colony, City, Suburbs, and Country, 1871-88.

The Table of Infantile Mortality shows that out of the total number of deaths for the year Infantile (14,408), 6,207, or 43.08 per cent., were of children under 5 years of age. The percentage of these mortality. deaths to total deaths in each of the divisions was as follows:—Sydney, 42.21; Suburbs, 51.82; Country, 38.92; these figures being higher than in the previous year by 2.56, 1.10, and 0.68 respectively; but as compared with the mean of ten years, while the city of Sydney is 1.09 above, the suburbs and the country districts are 1.81 and 0.45 respectively below the average.

From the above table it would appear that the mortality of infants was very much greater in the suburbs of Sydney than in the city itself, or in the country districts; and while this is so to a considerable extent, the difference is not so great as shown by the above figures, for before drawing a comparison it is necessary to take into consideration the high birth-rate of the suburbs, and also the larger proportion of young children who reside therein. The death-rate per 1,000 of the mean population of children under 5 years of age living in Sydney was 59.27; in the suburbs 60.60, and in the country 31.33. The rates in both Sydney and suburbs were higher than in the rest of the Colony, and from this may be gathered the fact that the metropolis is not so favourable to the fostering of infant life as the

The numbers of deaths of persons both under and over 5 years of age, compared with the estimated numbers living at each of these periods of life, give the following death-rates from 1871 to 1888.

		Under	5 years.			Over 5	years.

The majority of children who die under the age of 5 are really under the age of 1 year. The Deaths of following table gives the number who died in the city, suburbs, and country, during each year since 1871, children under together with the number per thousand as compared with the births.

DEATHS

DEATHS of CHILDREN under 1 year of age, 1871-88.

Deaths of old people.

The number of the persons of the age of 70 years and upwards who died during the year was 1,464, and of these 953 were males and 511 females. The numbers in the city and suburbs of Sydney and in the country districts are given in the foregoing table. There were 968 between the ages of 70 and 80 years, 435 between 80 and 90, 56 between 90 and 100, and 5 centenarians. Of these latter, one male aged 100 died at Grafton; one aged 101 at Newtown, Sydney; one aged 106 at Quirindi, and one aged 117 at Bourke, the fifth being a female aged 100, who died at Wilcannia. The man who is said to have attained the age of 117 years was a shepherd, and died at the Hospital, Bourke, from Bright's disease. He was born in England, and had been 80 years in the Colony.

BIRTHS and DEATHS registered in each Ward of the City of Sydney, from the 1st January to the 31st December, 1888.

7.									

In the foregoing table the deaths in hospitals, asylums, &c., are included. The numbers of persons who died during 1888 in the various public institutions in Sydney, Leichhardt, Glebe, Camperdown, Waterloo, Ashfield, and Manly are notified in the two preceding tables.

The death-rates of the Metropolis since 1881, the year of the last census, are given below:—
SYDNEY AND SUBURBS, 1881-1888.

			Death-rate	per 1,000 of	Estimated	Population,		
	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.
CITY OF SYDNEY	51.25	23'30	19.76	21.37	51.28	17.99	15.2	17.08
Suburbs—						·		
North-western	17.31	19.14	18.41	20.83	21.26	22'13	16.13	18.56
West Central	17.85	21.38	22.34	28.81	28.38	26.45	21.68	24.24
East Central	19.89	19.77	21,11	25.06	25.54	23.40	20.52	18.53
Eastern	14.92	15.86	16.92	17.39	17.92	13.86	12.41	14.29
Western and Southern	16.58	19.09	18.30	18.18	17.79	18.22	14.93	15.96
North Shore	14.92	16.02	12.83	14.86	16.40	14.58	12.01	12.45
METROPOLIS	19.11	20 77	19.14	21.54	21.21	19.32	16.19	17.44

Some of the above rates are higher than the average for the Metropolis, being influenced more or less by the numbers of deaths in public institutions.

Districts of the Colony.

All the Registry Districts of the Colony have been arranged in groups, according to locality. The following are the names of the separate divisions and the districts comprised in each, together with the estimated population on the 30th June, 1888. Immediately following will be found a table giving the numbers of births and deaths, the rates per 1,000 of population, and the infantile mortality in each

subdivision:—	n population
Registry Districts.	1888.
I. Western.—Balranald, Barringun, Bourke, Brewarrina, Broken Hill, Cobar, Menindie, Milparinka, Mossgiel, Nymagee, Silverton, Wentworth, Wilcannia	38,866
II. The Murray.—Albury, Corowa, Deniliquin, Hume, Jerilderie, Lyttelton, Moama, Moulamein	22,301
III. The Murrumbidgee.—Hay, Hillston, Junee, Narandera, Urana, Wagga	26,436
IV. Young.—Barmedman, Burrowa, Grenfell, Gunning, Murrumburrah, Temora, Young, Yass	29,701

For further information concerning births and deaths in Districts, see the various tables in the

Appendix.

Causes of Death

Prior to 1886 the causes of death in this Colony were classified according to the system of the late Dr. William Farr, F.R.S. This system was superceded in England a few years ago by a new method arranged by Dr. William Ogle (Dr. Farr's successor at the General Register Office, London), upon the basis of a mode of classification determined upon by a joint committee appointed by the Royal College of Physicians, London; and whilst this latter includes a few important deviations from the former, the changes on the whole are in the direction of more extensive exemplification, so that the admirable system of Dr. Farr still forms the groundwork of the new classification. The principal differences between the old and the new systems were referred to at length in the last Annual Report on Vital Statistics.

Table

Table showing the Classification of Diseases which were fatal to both sexes under and over 5 years, and the proportions per cent. of Deaths from each caus, in New South Wales, during the year 1889.

#### CLASS I.—SPECIFIC FEBRILE, OR ZYMOTIC DISEASES.

- Order 1. Miasmatic diseases.—Small-pox, 2; chicken-pox, 1; measles, 218; scarlet fever, 111; influenza, 14; whooping cough, 35; mumps, 3; diphtheria, 240; cerebro-spinal fever, 9; simple and ill-defined fever, 7; typhoid, enteric fever, 434.

  2. Diarrhæal diseases.—Cholera, 88; diarrhæa, 676; dysentery, 108.

3. Malarial diseases.—Remittent fever, 17; ague, 3.

4. Zoogenous diseases.—None.

5. Venereal diseases.—Syphilis, 62; gonorrhea, stricture of urethra, 7.

6. Septic diseases.—Phagedæna, 3; erysipelas, 36; pyæmia, septicæmia, 31; puerperal fever, 38.

#### CLASS II.—PARASITIC DISEASES.

Thrush, 28; hydatid disease, 22; worms, &c., 3.

#### CLASS III.—DIETETIC DISEASES.

Privation, 18; want of breast milk, 45; intemperance—(a) chronic alcoholism, 102; (b) delirium tremens, 16; (c) opium smoking, 1; surfeit (over-eating), 1.

#### CLASS IV.—CONSTITUTIONAL DISEASES.

Rheumatic fever, rheumatism of heart, 53; rheumatism, 41; gout, 21; rickets, 4; cancer, 404; tabes mesenterica, 237; tubercular meningitis (hydrocephalus), 134; phthisis, 1,045; other forms of tuberculosis, scrofula, 95; purpura, hæmorrhagic diathesis, 23; anæmia, chlorosis, leucocythæmia, 28; diabetes mellitus, 25; leprosy, 1.

#### CLASS V.—DEVELOPMENTAL DISEASES.

Premature birth, 388; atelectasis, 26; cyanosis, 25; spina bifida, 11; imperforate anus, 2; eleft palate, 5; other congenital defects, 20; old age, 718, at ages ranging from 55 to 106 years.

#### CLASS VI.—LOCAL DISEASES.

Order 1. Diseases of the nervous system.—Inflammation of the brain or its membranes, 225; apoplexy, 239; softening of the brain, 40; hemiplegia, brain paralysis, 173; paralysis agitans, 5; insanity, general paralysis of the insane, 91; chorea, 5; epilepsy, 86; convulsions, 664; laryngismus stridulus, 7; idiopathic tetanus, 15; paraplegia, diseases of the spinal cord, 57; brain disease (undefined), 85.

2. Diseases of the organs of special sense.—Otitis, otorrhea, disease of the ear, 4; epistaxis, disease of the nose, 3; ophthalmia, disease of the eye, 1.

3. Diseases of the circulatory system.—Endocarditis, valvular disease, 197; pericarditis, 19; hypertrophy of heart, 10; angina pectoris, 7; syncope, 54; aneurism, 61; senile gangrene, 16; embolism, thrombosis, 13; phlebitis, 8; heart disease (undefined), 506.

4. Diseases of the respiratory system.—Laryngitis, 52; croup, 210; other disease of the larynx and trachea, 5; emphysema, asthma, 61; bronchitis, 629; pneumonia, 682; congestion of the lungs, 125; pleurisy, 71; lung disease (undefined), 21.

5. Diseases of the digestive system.—Stomatitis, 31; dentition, 246; sore throat, quinsy, 21; dyspepsia,

20; hæmatemesis, 10; melæna, 12; diseases of the stomach, 89; enteritis, 514; ulceration of intestines, 32; ileus, obstruction of intestines, 70; stricture or strangulation of intestine, 9; intussusception, 11; hernia, 28; fistula, 1; peritonitis, 95; ascites, 16; gallstones, 2; cirrhosis of liver, 80; hepatitis, 65; jaundice, 53; other diseases of liver, 86; others, 19. Order

Order 6. Diseases of the lymphatic system and ductless glands.—Diseases of lymphatic system, 6; diseases of spleen, 2; bronchocele, 3; Addison's disease, 2.

7. Diseases of the urinary system.—Acute nephritis, 65; Bright's disease, 140; uramia, 36; suppression of urine, 10; calculus, 12; hæmaturia, 3; diseases of bladder and prostate, 48; kidney disease (undefined), 39.

8. Diseases of the organs of generation.—Ovarian disease 19; diseases of uterus and vagina, 8; disorders of menstruation, 8; pelvic abscess, 5; perineal abscess, 1; diseases of testes, penis, scrotum, &c., 2.

9. Diseases of parturition.—Abortion, miscarriage, 14; puerperal mania, 5; puerperal convulsions, 18; placenta prævia, flooding, 19; other accidents of childbirth, 57.

" 10. Diseases of the organs of locomotion.—Caries, necrosis, 21; arthritis, ostitis, periostitis, 8; others (curvature of spine, &c.), 7.

" 11. Diseases of the integumentary system.—Carbuncle, 4; phlegmon, cellulitis, 4; lupus, 3; ulcer, bed sores, 2; eczema, 10; pemphigus, 3; others, 2.

#### CLASS VII.—VIOLENCE.

Order. 1. Accident or negligence.—Fractures and contusions, 396; wounds, (a) gunshot, 28; (b) cuts, 22; burns, 113; scalds, 20; sunstroke, 37; lightning, 5; poison, 15; bite of snake or insect, 5; drowning, 176; suffocation, 42; otherwise (blood poisoning, umbilical hamorrhage, amputations, &c.), 41.

2. Homicide.—Murder, 30; manslaughter, 14.

3. Suicide.—Wounds—(a) gunshot, 29; (b) cut, stab, 23; poison, 45; drowning, 11; hanging, 17; otherwise, 7.

4. Execution.—Judicial hanging, 2.

,, 5. Violent deaths not classed.—Found drowned, 52; otherwise (open verdicts), 10.

#### CLASS VIII.—ILL-DEFINED AND NOT SPECIFIED CAUSES.

Dropsy, 52; atrophy, debility, inanition, 886; mortification, 2; tumour, 10; abscess, 7; hæmorrhage, 4; other ill-defined and not specified causes, 79.

Males, 8,453; Females, 5,955; Total, 14,408.

The number of deaths of males and females at each age from the various causes of death in Sydney, Causes of Death. suburbs, and country districts, will be found in the Appendix tables, but a list is here given of the principal causes of death in New South Wales during 1888, arranged in order of fatality:—

				No. of Deaths	
Dl.4Linia					Childhinth and Duanneral Flavor
Phthisis	• • •			1,045	Childbirth and Puerperal Fever
Accidents				900	Bright's Disease
Atrophy, debility (infa	ints)			886	Tubercular Meningitis (Hydrocephalus)
Old Age	•••			718	Suicides
Pneumonia				682	Congestion of the Lungs
Diarrhœa				676	Intemperance
Convulsions				664	Scarlet Fever
Bronchitis				629	Dysentery
Heart Disease (exclusi	ve of perio	carditi	sand		Peritonitis
aneurism)				614	Tuberculosis, Scrofula
Enteritis				514	Insanity
Typhoid (Enteric Feve	er)			434	Malformations
Cancer				404	Cholera
Premature Birth	•••			388	Epilepsy
Liver Diseases				286	Pleurisy
Dentition				246	Ileus, Öbstruction of Intestines
Diphtheria				240	Syphilis
Apoplexy				239	Aneurism
Tabes Mesenterica				237	Asthma
Inflammation of the B				225	Diseases of Spinal Cord
Measles				218	Rheumatic Fever and Rheumatism of
Endocarditis, Valvular			Peri-	-10	Hoart
1:4:				216	Drongy
Diseases of the Urina			lusive	210	Found Dogwood
of Bright's Disease				213	
			•••		Laryngitis
Croup	• • •			210	Rheumatism
Paralysis	•••	• • •	•••	178	Whooping Cough

From the foregoing it will be seen that the number of deaths from phthisis in the Colony was greater than from any other disease.

Accidental deaths are very numerous, especially in the country. The number registered during 1888 was 900, or 272 in the Metropolis and 628 in the country districts. The numbers for 1887 were 211 and 692 respectively. A considerable increase is therefore apparent in the Metropolis and a decrease in the country. The Bulli disaster, which occurred in the beginning of 1887, increased the total for that year. This was an explosion in a coal mine, about 45 miles south of Sydney, which occasioned the deaths of 81 miners.

<sup>\*</sup> Included with "Sunstroke" during these years.

There were 132 suicides last year, viz.:—102 of males and 30 of females. The number registered suicides during each of the last ten years, together with the various modes adopted by the suicides for taking life, and the ratios per 100,000 of population are given in the following table:—

Suicides, 1879-88.

It is remarkable that during 1888 no fewer than 18 persons (9 males, 9 females) committed suicide in various parts of the Colony by taking a poison called "Rough on Rats."

For the whole period embraced in the above table, suicide by hanging claims the largest number of

male victims, but death by poison was most favoured by women.

For purposes of comparison, the causes of death as far back as 1881 have been re-arranged in classes according to the new system, and will be found in the following table. A fuller table, giving the number of persons of each sex who died from each cause of death during a series of years, is given in the Appendix.

24

#### METEOROLOGY, SYDNEY, 1888.

Rainfall.—The total rainfall last year, as recorded at the Sydney Observatory, was only 23 inches, which is considerably less than half the average of the preceding twenty-nine years (49.86 inches). The number of days on which rain fell was 133. The year throughout was very dry, with the exception of the last five weeks, during which period over 7 inches fell. The following was the amount of rain during each of the ten years prior to 1888:—1878, 49\frac{3}{4} inches; 1879, 63 inches; 1880, 29\frac{1}{2} inches; 1881, 40 inches; 1882, 42\frac{1}{4} inches; 1883, 47 inches; 1884, 44 inches; 1885, 40 inches; 1886, 39\frac{1}{2} inches; and 1877, 60 inches; from which it is apparent that the two unusually wet years, 1879 and 1887, were immediately followed by very dry ones.

Lightning was seen on thirty-nine days.

Temperature.—The highest reading of the thermometer was 98.2, on the 18th January, and the Temperature, lowest was 38.9, on the 6th August. The highest average temperature was during the months of January, Sydney. February, and December, and it is noteworthy that deaths were most numerous during these months. On the other hand, the temperature was lowest in June, July, and August, with a corresponding low rate of mortality. The mean summer temperature was 70.9, and the winter 54.5.

Barometer.—The readings of the barometer were highest during April, the mean for that month

being 30.281, and lowest in January, with a mean of 29.932. Mean for the twelve months, 30.086. The following table gives the number of births and deaths in the city and suburbs of Sydney, together with the mean temperature in the shade, the mean height of barometer, and the rainfall during each month of the year 1888:—

Note.—In the foregoing table the deaths from each cause, which were recorded prior to 1886 under the old system of Nosology, have been re-arranged, as far as possible, in accordance with the new system. As the new classification contains a much larger number of headings than the old, it is impossible to supply as full information for the years prior to 1886 as it is for 1886, 87, and 88. The following notes will show under what heads several diseases, which are specially enumerated for these three years, are grouped for the former years:—(a) "Epidemic Rose Rash" (Class I, order I) is included with "Diseases of the Integumentary System" (VI 2). (b) "Others from vegetable parasites," included with "Others from animal parasites." (c) "Survy" (III) included with "Purpura" (IV). (e) "Anæmia, Chlorosis, and Leucocythæmia" (IV) classified with "Dropsy" (VIII), "Diseases of Menstruation" (VI 8), and "Other Diseases of Circulatory System" (VI 3). (f) "Atelectasis," "Imperforate Anus," and "Cleft Palate," classed with "Other Congenital Defects." (g) "Softening of Brain" (VI 1) and "Diseases of Brain" (VI 2). (i) "Endocarditis, Valvular Disease," "Hypertrophy of Heart," "Angina Pectoris," "Syncope," "Embolism," "Thrombosis," "Phlebitis," and "Varicose Veins," classed with "Other Diseases of Circulatory System." (k) "Senile Gangrene" (VI 3) included with "Septicæmia" (I 6). (l) "Others of Larynx and Trachea" with "Laryngitis." (m) "Gall-stones" and "Cirrhosis of Liver" with "Other Diseases of the Liver." (n) "Addison's Disease" (VI 6), "Uræmia," and "Hæmaturia" (VI 7), with "Other Diseases of the Urinary System" vii 7).
